

David Newburn is an Assistant Professor in the Department of Agricultural and Resource Economics at the University of Maryland. He has worked extensively on spatially explicit parcel-level models of land-use change over the last decade. This includes several research projects to study how residential land-use patterns are affected by smart growth policies, such as zoning, urban growth boundaries, Maryland's Forest Conservation Act, septic law (SB 236), and adequate public facility ordinances (APFOs). He is a member of the Baltimore Ecosystem Study (BES), Chesapeake Bay Program Science and Technical Advisory Committee (STAC), and is working on an NSF Water Sustainability and Climate project in the Baltimore Metropolitan Region on urban development and impacts to the urban water cycle and nutrient export. His research articles have appeared in both economic and multidisciplinary journals including the *American Journal of Agricultural Economics*, *Journal of Environmental Economics and Management*, *Land Economics*, *Annual Review of Resource Economics*, *Conservation Biology*, *Ecological Applications*, and *Journal of the American Water Resources Association*.
